

GRANICRETE
INTERNATIONAL

Ice Granite

For this finish you will need:

1. Killer Blue-Dispersion
2. Black FX
3. Blinding White – Acryli-Shade

Mixing Procedure:

1. Mix Killer Blue (3 caps to 24oz of water) into a *Granicrete* professional spray bottle.
2. Mix Black FX (2oz to 20oz of water) into a *Granicrete* professional *spray bottle*.
3. Mix Blinding White (4oz to 20oz of water) into a *Granicrete* professional *spray bottle*

Step-by-Step Procedure:

1. Apply all Granicrete Countertop Blend coats per installation instructions.
2. Stream and flood 100% of the surface using Killer Blue. Allow to dry before proceeding.
3. Mist and speckle 55% of the surface using Black FX. Allow to dry before proceeding.
4. Mist and speckle 50% of the surface using Blinding White.
5. Allow surface to completely dry and then apply Granicrete Crystal Top Epoxy per product instructions.

Professional Tip: Constantly shake up FX colors while being used in a spray bottle. The powder within each FX color is what makes them unique. If the color rest in the spray bottle the powder will settle to the bottom.

Ice Granite Notes:
